Django

What is Django

Django is a python framework for building website

Django is MVT framework (M=Model, V=View, T=Template)

First Project

Install django: **pip install django**

Create new project: **django-admin startproject projectname**

Run development server: **python manage.py runserver**

Create an application: **python manage.py startapp appname**

note - after creating a application, you need to install the app in settings.py

Project Structure

Django Folder Structure

URLs and Views

URL = Uniform Resource Locator

Views are the files where we write programming logic.

Views can be written in two ways (function based and class based)
